

File structure of Touch Player APK

File structure is as follows:

```
videonpix(touchplayer)
|-- barcode
|   |-- LANDSCAPE
|   |   |-- 9787111267768.jpg
|   |   |-- ...
|   |   `-- 9789866072000.jpg
|   |-- noinformation.jpg
|   |-- PORTRAIT
|   |   |-- 9787111267768.jpg
|   |   |-- ...
|   |   `-- 9789866072000.jpg
|   `-- qbackground.jpg
|-- log
|   `-- log_2014_01_21.txt
|-- thumbnail
|   |-- 10.jpg
|   |-- ...
|   `-- 1.jpg
`-- video
    |-- 10.mp4
    |-- ...
    `-- 1.mp4
```

- (1) There are four sub-folders (barcode, log, thumbnail, video) under the main folder “videonpix(touchplayer)”.
- (2) Under folder “barcode” you have “LANDSCAPE” and “PORTRAIT” folders which hold pictures corresponding to the barcodes scanned depending on whether the display device is in landscape or portrait mode. The file name should be the corresponding barcode number in numeric form only.
- (3) Logs will be automatically generated when videonpix(touchplayer) APK is running and be stored in “log” folder.

(4) "thumbnail" folder holds the thumbnail pictures to display in 2, 4, 6 picture page (the main page). The number of pictures inside the thumbnail folder will determine the number of pictures shown in the main page. The name of the picture will correspond to the name of the video (e.g. 1.jpg corresponds to 1.mp4).

(5) "video" folder holds the videos to play.

P.S.: if the number of thumbnails is greater than the number of videos, the extra thumbnails will be shown, but because there's no corresponding video, the video played will be the one with the next corresponding thumbnail.
